

RICO INTRODUCES Pegasus ELITE SERIES COUNTERBALANCE

FOR IMMEDIATE RELEASE

(March 23, 2015 – Medina, Ohio) Rico brings standardization to its newest four-wheel Pegasus ELITE series Counterbalance truck.

The vehicle is designed based on Rico's original heavy duty Pegasus Series foundation but in a standard chassis design and standard, industrial certified components. The Elite Series' all steel design offers multiple mast and fork combinations to service various applications and markets that have load capacities ranging from 20,000 to 40,000 pounds.

A high level of safety and serviceability was designed into the Elite Series Counterbalance to simplify maintenance and prolong equipment life. Features include larger tanks for cooling, steel stacked counter weights, STD knuckle steering for a precise turning radius, STD engine and Kessler Axel. The operator compartment boasts a clear view mast with a low profile chassis to allow operators to see the fork tips to enable the highest visibility.

This affordable and competitively priced Pegasus Elite series is designed for those production needs of higher capacity in a standard foot print and design. Strategically designed for controlled production environments that require forks for standard loads whilst maintaining an unmatched performance and continued reliability throughout the day and its lifetime. The standard, "off-the-shelf" model enables it to be 'application ready' resulting in quick, unmatched turnaround time. These forklifts are suited for rentals and large fleet management.

The industry demanded - and Rico answered with the strongest, most reliable and cost effective sit-down, heavy capacity truck in the market. To learn more about the new Pegasus Elite Series Counterbalance, contact the RICO Sales Department and a brand new Elite Series Website is coming soon!
